NDCRS *ARCHITECTURAL* SITE FORM
PAGE 3—*Feature Data*

Field Code Regan School SITS# 32 BL

Complete a Page 3 for each feature.

1. *Feature* Description, Integrity, Eligibility:

This feature is a one room prairie school, moved into the town of Regan, sitting on railroad ties. The building has been a city hall, a bar and lastly storage. The building is not longer in use. The main body of the school measures 28 feet east to west and 18 feet north to south. The rear addition measures 12 feet east to west and 18 feet north to south.

The building has asphalt shingles. A newer chimney, concrete blocks with a pipe out the top, sits at the west end of the main body of the school. Eases have closed soffits.

Wide headers run under both peaks of the main body of the school. The siding is 6 inch wood lap with 4 inch wood corner trim. The paint is failing. There is not entry/porch. A newer door gives entry to the school from the east. Two small, fixed pane windows are either side of this door. Three windows on the north appear to be the top half of double hung windows with lap siding covering the lower half. Another door gives entry into the addition at the west end of the building and another window near the door is also half covered. On the west side there may have been a door at the middle of the wall. The south side has yet another covered window opening. The south wall of the main body has three area that are covered with board lumber and look to have been windows openings as well. The building has electricity as evidenced by the wires and an electric meter on the north side.
